Liver cancer support
For information about liver cancer or where to go for support call the Cancer Council on 13 11 20.
Qualified cancer nurses can answer your questions about the effects of cancer, explain what will happen during treatment or link you to support groups and other community resources.
If you need an interpreter, call TIS (the Translating and Interpreting Service) on 13 14 50. For support and advice for carers, call the Carers Association on 1800 242 636.

1. Initial investigations and referral
Your general practitioner (GP) will assess your symptoms (for example a hard lump or pain on right side of abdomen), conduct a physical examination and arrange blood tests if needed.
Your GP should also discuss your needs (including physical, psychological, social and information needs) and recommend sources of reliable information and support.
If liver cancer is suspected, you will be referred to a specialist for further testing. Your GP will provide the specialist with information about your medical history, whether there is a history of cancer in your family, and your test results.
It can be helpful to bring a family member or friend with you to your appointments.
Tests you may have:
- **Ultrasound**
  This uses high-frequency sound waves to make an image of a person's internal body structures.
- **Assessment of liver and renal function**
  A blood test to see how well your liver and kidneys are working.

2. Diagnosis and staging
The specialist will discuss your test results with you and options for further testing. This is to find out whether cancer is present, and if it is, its stage of development and if it has spread.
Tests you may have:
- **Computed tomography (CT) scan**
  Computer technology and x-rays are used to create detailed images of the liver.
- **MRI scan**
  Magnetic fields and radio waves are used to take pictures of inside the body.
Further tests you might have:
Some people have further tests such as a PET scan or biopsy.
It can also be helpful to contact cancer peer support groups and support groups for carers.

3. Treatment
To ensure you receive the best care, your specialist will arrange for a team of health professionals to plan your treatment based on your preferences and needs.
The team will be made up of health professionals who have experience managing and supporting a person with liver cancer. Your specialist will tell you when the team will be discussing your case.
Your team should discuss the different treatment options with you including the likely outcomes, expected timeframes, possible side effects, and the risks and benefits. Your doctor may also suggest you consider taking part in a clinical trial. You might want to ask for more time before deciding on your treatment.
Let your team know about any complementary therapies you are using or thinking about trying. Some therapies may not be appropriate, depending on your medical treatment.
There are a number of ways to treat liver cancer. In some cases, more than one type of treatment could be used to get the best outcome.

Treatment options for early liver cancer:
- **Local ablative therapies** are the most common treatment for liver cancer. Radio waves are used to heat and destroy a tumour without removing it from your body.
- **Surgery: Liver surgery**
  Surgery may benefit people with early liver cancer. It is important that this surgery is performed by a surgeon who is very experienced in performing liver surgery and performs several operations every year.
- **Regional therapies** use heat and/or chemotherapy or radiation therapy injected directly into the liver to slow down the speed at which the tumour grows.
6. Living with cancer

Side effects: Some people experience side effects (for example tiredness) that continue beyond the end of treatment. Side effects sometimes might not begin until months after treatment has finished.

For more information about side effects ask your doctor or visit www.cancervic.org.au/about-cancer/survivors/long-term-side-effects

Advance care plan: Your doctor may discuss with you the option of developing an advance care plan. An advance care plan is a formal way of setting out your wishes for future medical care.

For more information about advance care planning ask your doctor or visit www.advancecareplanning.org.au

Palliative care: This type of treatment will be used at different stages to help you with pain relief, to reduce symptoms or to help improve your quality of life.

For more information about palliative care ask your doctor or visit www.palliativecare.org.au

7. Questions of cost

There can be cost implications at each stage of the cancer care pathway, including costs of treatment, accommodation and travel. There can be substantial out-of-pocket costs if you are having treatment in a private health service, even if you have private health insurance. You can discuss these costs with your doctor and/or private health insurer for each type of treatment you may have. If you are experiencing financial difficulties due to your cancer treatment you can contact the social worker at your local hospital.

For more information about accommodation and travel costs visit www.cancercouncil.com.au/get-support/practical-support-services
